

Special Characters	
<b>&amp;</b>	Background job
<b>#</b>	Comment
<b>~</b>	Home Directory
<b>!</b>	Logical NOT
<b>'</b>	Quote (Strong)
<b>"</b>	Quote (Weak)
<b>&lt;</b>	Redirect input
<b>&gt;</b>	Redirect output
<b>&gt;&gt;</b>	Redirect output + append to file
<b> </b>	Redirect (pipe) output to next command
<b>/</b>	Separator for pathname directories
<b>;</b>	Separator for shell commands
<b>[ ]</b>	Start and end a character-set wildcard
<b>{ }</b>	Start and end a command block
<b>( )</b>	Start and end a subshell
<b>(( ))</b>	Perform arithmetic
<b>*</b>	Wildcard
<b>?</b>	Wildcard – single character
<b>\$</b>	Variable expression
<b>\</b>	Escape a special character
<b>n&gt;&amp;m</b>	Descriptor n is a copy of output file descriptor m
<b>n&lt;&amp;m</b>	Descriptor n is a copy of input file descriptor m

String Operators	
<b>\${varname:word}</b>	Returns word
<b>\${varname:=word}</b>	Sets and returns word
<b>\${varname:?message}</b>	Prints message and exits
<b>\${varname:offset:len gth}</b>	Returns substring
<b>\${varname:+word}</b>	If varname is defined, return word

Pattern-matching operators	
<b>\${varname#pattern}</b>	Match first from the start
<b>\${varname##pattern }</b>	Match last from the start
<b>\${varname%pattern}</b>	Match first from the end
<b>\${varname/pattern/replace}</b>	Match longest and replace
<b>\${varname//pattern/replac e}</b>	Match all and replace

Variables	
<b>\$0, \$1, \$2,</b>	Positional parameters
<b>\$@</b>	"\$1" "\$2" "\$3" ...
<b>\$*</b>	A string of positional params > 0
<b>\$#</b>	Number of positional params
<b>\$?</b>	Exit status of last command run

Functions	
<b>define</b>	function myfunction { ... } or myfunction ( ) { ... }
<b>call</b>	myfunction arg1 arg2 ...
<b>keywords</b>	local – limit var scope

If / else conditions	
<b>x &amp;&amp; y</b>	If x runs, then run y
<b>x    y</b>	If x fails, then run y
<b>x -a y</b>	x AND y
<b>x -o y</b>	x OR y
<b>-lt, -le, -eq, -gt, -ge, -ne</b>	Integer comparisons
<b>=, !=, &lt;, &gt;</b>	String comparisons
<b>-n str1</b>	str1 has length > 0 (nonzero)
<b>-z str1</b>	str1 has length 0 (zero)
<b>-d file</b>	File exists and is a directory
<b>-e file</b>	File exists
<b>-f file</b>	File exists and is a regular file
<b>-r file</b>	User has read permission on file
<b>-s file</b>	File exists and is non empty

<b>-w file</b>	User has write permission on file
<b>-x file</b>	User has execute permission on file, or search if directory
<b>-N file</b>	File was modified since it was left read
<b>-O file</b>	User owns file
<b>-G file</b>	File's group ID matches the user's group ID
<b>file1 -nt file2</b>	file1 has newer modification time than file2

Flow control sentences	
<b>if</b>	if <i>condition</i> ; then <i>commands</i> ; fi
<b>for</b>	for (( <i>init</i> ; <i>condition</i> ; <i>increment</i> )); do <i>commands</i> ; done
<b>for</b>	for <i>var</i> in <i>array</i> ; do <i>commands</i> ; done
<b>case</b>	case <i>expression</i> in <i>pattern1</i> ) <i>commands</i> ;; <i>pattern2</i> ) <i>commands</i> ;; *) <i>commands</i> ;; esac
<b>while</b>	while <i>condition</i> ; do <i>commands</i> ; done
<b>until</b>	until <i>condition</i> ; do <i>commands</i> ; done

Arrays	
<b>Arr_name=('el1' ' el2' 'el3')</b>	define
<b>Arr_name[index]</b>	Element #index
<b>Arr_name[-1]</b>	Last element
<b>Arr_name[@]</b>	All elements, space-separated
<b>#Arr_name[@]</b>	Array length
<b>#Arr_name[index]</b>	String length of the Nth element
<b>Arr_name[@]:m:n</b>	Range (from position m, length n
<b>!Arr_name[@]</b>	Keys of all elements
<b>Arr_name=("\${Arr_name[@]}") "newElement")</b>	Push
<b>Arr_name+=('newElement')</b>	Also Push
<b>unset Arr_name[n]</b>	Remove one item

Dictionaries	
<b>declare -A dict</b>	Define
<b>dict[key]="value"</b>	Define value of a key
<b>dict[key]</b>	Value of a key
<b>dict[@a]</b>	All values
<b>!dict[@]</b>	All keys
<b>#dict[@]</b>	Number of elements
<b>Unset dict[key]</b>	Delete the key

Useful Commands	
<b>Type &lt;cmd&gt;</b>	Determine type of command:

	-a ; displays all the locations
<b>Builtin &lt;cmd&gt;</b>	Run builtin commands explicitly
<b>Which &lt;cmd&gt;</b>	Locate the executable of a command: -a ; show all locations
<b>Clear</b>	Clear the terminal screen
<b>Echo "str1"</b>	Print message to terminal screen: -e ; uses escape sequences like (\n = newline, \t = tab) -n ; supresses automatic newline after print
<b>Printf &lt;format&gt; &lt;variables&gt;</b>	Print messages to terminal screen. Formatting be like: %s – String %Xs – String wide X chars, left aligned %Xs – String wide X chars, right aligned %d – Integer (%-Xd, %Xd) %f – Float %.Xf – Round to X decimal spaces
<b>Date &lt;options&gt; &lt;+format&gt;</b>	Will display date and time. Formats (" +%Y-%m-%d"): %Y – Year, %m – month, %d – day, %H – hours, %M – minutes, %S – seconds, (%A uppercase for full name) %a – DayOfTheWeek, (%B) %b - Month Options (-d "yesterday"): "yesterday", "next Monday",
<b>Read &lt;options&gt; &lt;variable&gt;</b>	Read input from user or file and store into variable (read var1). Options: -p "Text" : print before input -a : store the input in array
<b>History &lt;options&gt;</b>	Display the command history for that session. Options: -c : clear the history -X : print the last X commands -a : appends history to bash history file -d X : deletes the command with index X from history
<b>Sleep &lt;num_time&gt;</b>	Delay the execution of a script. Num_time: Xs : delay for X second(s) (default) Xm : delay for X minute(s) Xh : delay for X hour(s)
<b>Man &lt;command&gt;</b>	Opens the manual pages for the <command>.
<b>Ls &lt;options&gt; &lt;path&gt;</b>	List the files and directories in the current working

	directory or given path. Options: -l : list detailed view for files -a : show all files, even hidden -alp : ???		-d : outputs only duplicates -u : outputs only the unique
<b>pwd</b>	Display the current working directory.	<b>Rev &lt;file&gt;</b>	Reverse the characters in each line of the input stream or file
<b>Cd &lt;directory&gt;</b>	Change the current working directory. <directory>: '/path' : changes directory to path '..' : changes to parent directory of the current one '~username' : changes to home directory for username '-' : changes to previous working directory used	<b>Tr &lt;options&gt; &lt;set1&gt; &lt;set2&gt; &lt;file&gt;</b>	Translate or delete characters. Set1 is translated to Set2. -d : removes the characters -c : complement the Set1
<b>Mkdir &lt;directory&gt;</b>	Creates new directory. <directory> can be: 'd1' : creates new directory called d1 'd1' 'd2' 'd3' : creates more directories in the current one -p 'd1/d2' : creates d1 and another directory d2 as d1's child	<b>Wc &lt;options&gt; &lt;file&gt;</b>	Counts the number of lines, words, bytes. Options: -l : only counts the lines -w : only counts the words -c : only counts the bytes
<b>Rmdir &lt;directory&gt;</b>	Works the same as mkdir, but it deletes the directory if it is empty.	<b>Grep &lt;options&gt; &lt;pattern&gt; &lt;file&gt;</b>	Search for specific pattern or regular expression. Options: -i : ignore case -v : invert the match (print only the lines not matching the pattern) -w : match only whole words -n : print the line numbers for each match -r : search recursively through directories
<b>Cat &lt;file&gt;</b>	Display the contents of the file on the terminal. <file>: 'file.txt' : displays file.txt 'f1.txt' 'f2.txt' : displays files consecutively -n 'file.txt' : displays file.txt with numbered lines	<b>Shift &lt;X&gt;</b>	Shift the positional parameters to the left. X is number of positions to shift.
<b>More, less, od, hexdump</b>	More and less are both text viewers, od gives octal output and hexdump hexadecimal.	<b>Jobs &lt;options&gt;</b>	Display a list of jobs that are currently running in the background or are suspended. -l : also displays PID of a job -p : displays only the PIDs -r : displays the running jobs -s : displays the stopped jobs
<b>Vi, vim, emacs, nano</b>	File editors. Use 'man file_editor' to learn how to use them.	<b>Fg &lt;JID&gt;</b>	Bring a job that is running in the background the foreground.
<b>Cp &lt;source&gt; &lt;destination&gt;</b>	Copy files or directories from source to destination. Cp file /path : copy file to path Cp -r directory /path : copy directory with all its contents to path	<b>Bg &lt;JID&gt;</b>	Start a suspended job in the background.
<b>Mv &lt;source&gt; &lt;destination&gt;</b>	Moves files or directories from source to destination. Mv file /path : move file to path Mv directory /path : move directory to path Mv file.txt newfile.txt : renames file.txt to newfile.txt	<b>Disown %&lt;JID&gt;</b>	Remove jobs from shell's job control. (disown %2 : removes job with JID 2)
<b>Uniq &lt;options&gt; &lt;file&gt;</b>	Removes all consecutive lines. Options: -c : also counts the amount of duplicates -i : ignores the case	<b>Ulimit &lt;options&gt;</b>	Display the resource limits of the current shell and its children. -a : displas all current limits
